

In order to offer wider access to our open days on technological exchange which provide the opportunity to update and upgrade know-how on recent tool and work method development in our area of activity, EDF Services Archipel Guadeloupe is pleased to host the ELEC ANTILLES 2001 exhibition on 14th and 15th June at the World Trade Center in Guadeloupe.

With the participation of eleven exhibitors and numerous conferences on the use of grid plant and equipment, our company wishes to make a significant contribution to the improvement of the distribution of electricity within the archipelago.

EDF will also present on its stand our software capable of producing studies for connections (high, medium and low voltage) for new sources of energy, in addition to the design, study and planning of transmission grids.
