CLOSING DATE: June 15th, 2021

About us

Saba Electric Company is the sole producer and distributor of electricity on the island of Saba. With its diesel power plant located near the Fort Bay harbor and expansive distribution network, which is mostly underground, SEC supplies electricity to some 1,260 homes and businesses islandwide.

Our team is comprised of 16 dedicated workers divided into 3 departments: administration, distribution and production.

SEC's power plant is powered by 2 ABC engines and 3 reserve Caterpillar engines with a small solar installation on its rooftop. SEC also has 2 1MW solar parks, which account for about 40% of our energy demand. Our goal is to continue to increase our renewable energy share and thereby decrease our dependency of fossil fuels for electricity production.
